MARKETFOOT

Game Rules & Mechanics

The manager game where your Ligue 1 players have a value that changes with every match and with the market. Build your squad, make the right calls each matchday and push its value up.

01 How the game works

MarketFoot is a free online football manager game based on Ligue 1 (2026/2027 season, 18 clubs, 34 matchdays).

Every Ligue 1 player has a **MarketFoot value** expressed in euros. This value changes for two reasons:

- **their real-life performances**: after each match, they earn primes (starting, goals, assists, win…) or take malus (card, did not play…);
- **the market**: when managers buy them, their price rises; when managers sell them, it falls.

As a manager, you have a **budget** to build a **squad**. The goal is to own the most valuable squad and rack up as many earnings as possible over the season.

1. Recruit	2. Prepare	3. Cash in	4. Adjust	5. Climb
Pick your players within your budget	Line-up, captain, bonus and predictions before each matchday	Real matches generate primes and malus	Free transfers or mercato orders	Rankings, trophies, Hall of Fame

The season

- The championship is divided into **matchdays** (MD1 to MD34), grouped into a **first half** and a **second half** of the season.
- A “Next match in…” countdown at the top of the screen shows the time left before the next match, and therefore before the matchday choices are locked.
- **Mercato periods** (transfer windows) open during the season (see part 11).

Navigation

Menu	Content
My Team	Tabs: 1st Line-up, Line-up, Captain, Transfer, Predictions, Speculation + Bonus panel
Rankings	Overall, Earnings, Predictions, Speculation, Honours, Bench
Ligue 1	Matchday results, match sheet with each player's primes, league table
Players	Full list of Ligue 1 players (Overall, Performance, Speculation) and player profiles
Hall of Fame	All-time records for managers and players
My Space	Performance, Honours, Friends, profile and preferences

02 Glossary

Term	Definition
MarketFoot value	A player's current value. It is used as both the purchase price and the sale price.
Initial value	The player's value at the start of the season.
Primes	Total of the bonus and malus earned by the player in their matches.
Mercato (for a player)	Change in value caused by managers buying and selling.
Holders / Owners	Number of managers who have this player in their squad.
My squad	Sum of the values of all the players in your team.
Budget	Available money, not invested in players.
Locked account	Money set aside that cannot be used for now (see part 18).
Starters / Bench	The 11 players fielded for the matchday / the substitutes in your squad.
Form	Recent results of a player or club: V (victoire = win), N (nul = draw), D/P (défaite = loss), with the primes from the last matches.

03 Building your team

At the start, the "1st Line-up" tab has you recruit your full squad.

> **Rule shown on screen:** "Pick your players according to your budget. You can have a maximum of 4 players from the same club."

Squad structure

- **11 starters** placed on the pitch by position: goalkeeper (GK), defenders (DEF), midfielders (MID), forwards (FWD). The mock-ups use a 4-3-3 formation.
- **A bench** of 8 substitutes, split by position (2 slots per line in the mock-ups).

How to recruit

- Click an empty slot on the pitch or the bench: a panel lists the players available for that position, with their value.
- You can open a player's quick profile (player-out panel) before choosing them; it opens to the left of the existing panel with a move-in effect.
- A player cannot be recruited if the constraints are not met: price higher than the remaining budget ("in budget / out budget" indicator) or the 4-players-per-club limit already reached.
- With each signing, the player's price is deducted from your budget. What is left becomes your available budget.

> **To be decided:** the starting budget amount.

04 A player's value

The player profile breaks down their value as follows:

MarketFoot value = Initial value + Primes (payouts) ± Mercato (purchases / sales)

What makes it move

- **Match primes** (part 05): paid after each matchday, positive or negative.
- **Market activity**: each time a manager buys a player, their value goes **up**; each sale makes it go **down**. The player profile details every movement: date, time, type (purchase, sale, matchday primes, mercato), impact and new value.

The “Top Buys / Top Sells” side panel shows the most bought and most sold players, with the impact on their value and the number of transactions in brackets.

What the player profile shows

- Current value and % change, initial value, total primes, total mercato, number of holders;
- Statistics: matches played (of which started), not played, goals (of which penalties), assists, cards;
- Market activity: number of purchases and sales (total, today, last mercato);
- Matchday-by-matchday prime history (gains / losses chart) and match-by-match breakdown;
- If the player is in your team: purchase date and price, and the capital gain made since.

05 Match primes

After each real match, every player receives a prime calculated from their match sheet. It is added to their value, and part of it is added to the manager's transfer budget: 30% to the locked account, 70% to the budget.

The 1st number applies as a starter, the 2nd number as a substitute. All amounts in k€

Event	Goalkeeper	Defender	Midfielder	Forward
Starter				
Substitute				
Goal scored				
Penalty scored				
Assist				
Clean sheet				
Hat-trick *				
Goalkeeper save				
Bonus for 8+ saves *				

7.4. Negative primes scale — Player

Event	Goalkeeper	Defender	Midfielder	Forward
Match not played				
Red card				
Yellow card				
Own goal				
Substituted during the match				
Goal conceded (from the 2nd conceded)				
Penalty missed				

7.5. Scale — Team

Event	Scale
— French Championship —	
Away win	
Home win	
Away draw	
Home draw	
Away loss	
Home loss	

The **Ligue 1** page shows the league table with the list of the last matchday's results in a banner below the menu. For each match, the MarketFoot match sheet shows: each club's starters, substitutes and players not in the squad, minutes played, events and the prime earned by each player. The captain's **×2** multiplier also appears there.

> **To be decided:** the exact scale for each event (the amounts in the mock-ups are fictitious)

06 Preparing a matchday

Before the first match of each matchday, the manager sets four levers from “My Team”:

Lever	What it's for
Line-up	Choose the 11 starters who will earn primes
Captain	Double one starter's primes
Bonus	Bet on a specific event: if it happens, +10% on the starters' primes
Predictions	Predict the results (1 N 2) of the matchday's matches

Timeline of a game cycle:

1. Teams frozen (2 h before their match)

2. Start of a matchday's matches
3. End of the matchday's matches
4. Entry of match sheets, value calculation, prime distribution, budget + rankings update
5. Mercato for 24h: transfer orders
6. Closing, teams frozen: execution of transfer orders, value recalculation, budget + rankings update
7. Unfreeze (opening)

Example of a typical schedule (indicative):
1. Friday 6:30pm freeze of the teams playing on Friday evening at 8:30pm → Saturday 3pm, freeze of the teams playing at 5pm; Saturday 7pm, freeze of the teams playing on Saturday at 9pm, etc. up to Sunday 7pm, freeze of the teams playing at 9pm (last match)
3. End of matches
4. Entry of match sheets, prime calculation → rankings/budget update for the gamers
5. Monday 8pm: mercato opens for 24h; gamers can place their orders in the mercato order book (4 max)
6. Tuesday 8pm: mercato closes. Orders executed, rankings/budgets updated → Tuesday 8:30pm unfreeze. Transfers open again (each gamer can make transfers if they still have any left out of the 4 allowed, until the start of the next matchday)

Freeze — rules

- **Trigger: 2 hours before kick-off** (prevents waiting until the last minute to confirm starters).
- No transactions on players due to take part in the match concerned, or who took part in an earlier match of the same matchday.
- **Progressive / partial freeze** if matches are not simultaneous: only players from teams whose match is approaching (≤ 2 h) are frozen.
- **Full freeze** = all of the matchday's teams have played.
- The **prime distribution** and the **revaluation of values** are done manually by the admin in the input console **during a full closure** (usually the day after the last match). The new rankings and budgets become visible when the game reopens.

Mercato — rules

- 1st period after a matchday; orders are placed in an **order book** and **executed at the end of the mercato**. The post-mercato update can be done manually by the admin.
- Predictions, substitutions and captain choice are possible / direct transfers are **not possible; only transfer orders can be entered in the order book**.

Opening/Unfreeze — rules

- All transactions possible (squad creation, transfers, substitutions, captain choice, predictions).
- **General**: all players can be bought/sold.
- Takes place once the prime distribution and the revaluation of values have been completed.

07 The line-up

> **Rule shown on screen:** “To change your line-up, click a starter and choose their replacement from the players in the same position on your bench.”

- Changes are made **position for position**: a defender can only be replaced by a defender from the bench.
- Unlimited substitutions between starters and substitutes
- Only the starters bring the matchday's **starter earnings** to the manager. The substitutes' earnings are counted separately (“Bench primes”) and have their own ranking.
- The pitch can show three pieces of information about each player: their **Value**, their **Speculation** (change since the last mercato or since a chosen date) and the number of **Owners** (how many managers have this player in their team**)**.

08 The captain

> **Help message:** “Choose your captain from your starters: their earnings will be doubled for the next matchday. Each player can only be captain 6 times per season.”

- The captain is chosen from the **11 starters**, then confirmed.
- Their primes for the matchday are **multiplied by 2** (shown as “×2” on the match sheet). The doubling also applies to malus.
- Each player has a **usage counter** (“used / maximum” format) and can be chosen 6 times in the season. Choosing a player as captain increments it by 1: the same player therefore cannot be captain indefinitely, which forces managers to rotate.
- The “eye” icon opens the player's profile to compare before choosing.

09 Bonus

> **Help message:** “Play one bonus per matchday. If it comes true, you earn 10% more on your starters' total primes.”

- The manager can play **only one bonus per matchday**.
- Each bonus corresponds to an event. **Every bonus pays the same**: if it comes true, the manager earns **10% more on the total primes collected by their starters** over the matchday.
- Each bonus has a **usage counter**. When it reaches the maximum, the bonus is greyed out and no longer available.

- **To be decided:** the exact scale for each bonus, as well as their names

Bonus	Comes true if…
The Cholismo	At least 2 players in your line-up win 1-0
The Turpin	A player in your line-up scores a penalty
Clean Sheets	Your goalkeeper wins their match without conceding a goal
Out of the Fridge	A player in your line-up comes off the bench and scores
Caviar in Stock	A player in your line-up provides two assists in the same match
Fergie Time	A player in your line-up scores in stoppage time

10 Predictions

For each match of the Ligue 1 matchday, the manager predicts the result:

- **1** = home win, **N** = draw, **2** = away win.
- Predictions are made matchday by matchday; you can navigate between matchdays (MD1…MD34).
- Each prediction can be changed until **its match kicks off**.
- After the matches, each prediction is marked: **green** = correct, **red** = wrong (the correct result is then shown in black).
- The matchday summary shows the **score** (rate of correct predictions), the managers' **average** and the **earnings** obtained.
- Prediction earnings are added to the matchday earnings and feed the **Predictions ranking**.

11 Transfers and the mercato

> **Help message:** “Choose the player to replace, then select a player in the same position. You are allowed 4 transfers between each matchday, mercato included.”

The principle

- A transfer is always a **swap**: one player leaves your squad (sold at their current value) and one player comes in (bought at their current value).
- The panel compares the outgoing and incoming players and shows the **balance** of the operation, tax included.
- Buying a player raises their value; selling them lowers it (part 04).

The rules

Rule	Detail
Quota	**A maximum of 4 transfers between two** league matchdays. Mercato and free transfers share this quota: with 3 orders placed in the mercato, 1 free transfer remains.
Same position	The incoming player must play the same position as the outgoing player.
Budget	A transfer cannot be made without the necessary budget, **tax included** (in / out budget indicator).
Tax	Every transfer is taxed. **The rate is not the same** for a free transfer and for a mercato transfer.
Club limit	The squad can never include more than 4 players from the same club.

> **To be decided:** the exact transfer tax scale

Two types of transfers

Type	How it works
Free	Made outside the mercato period, executed on confirmation, at the current value. Subject to the free-transfer tax.
Mercato	During a mercato window, the manager places **transfer orders**, which are executed when the window closes. An order can be cancelled as long as the mercato is open, which frees up a slot in the quota. Subject to the mercato tax.

The history (My Space > Performance > Transfers) lists every operation between each matchday: date, type (Mercato or Free), outgoing player and their value, incoming player and their value, balance.

A transfer is only confirmed if: BUDGET + VALUE OF PLAYER SOLD >= VALUE OF PLAYER BOUGHT + TAX

Detailed mechanics of the mercato:

5.1. Accepting an order in the order book

An order is only accepted if the “mercato budget” **remains positive** after it is applied.

BUDGET + SUM (VALUE OF PLAYERS TO SELL) >= SUM VALUE OF PLAYERS TO BUY (with tax) + NB_ORDERS + (% of SUM(VALUE_OF_PLAYERS_TO_BUY))

- The values used are **the pre-mercato values**.

5.2. Executing orders and recalculating values

At the end of the mercato, orders are executed using the updated values resulting from all the orders placed by ALL users:
PLAYER_VALUE_AFTER_MERCATO = PLAYER_VALUE_BEFORE_MERCATO + (NUMBER_OF_PURCHASES - NUMBER_OF_SALES) * (20000/2)

- Number_of_purchases / Number_of_sales = purchases/sales by **all gamers** of this player during the mercato.
- **Sales of players acquired in the initial squad are NOT counted.**
- The constant **€20,000** = change in value per purchase (+€20,000) and per sale (−€20,000).
- Mercato transfers earn **50% of the player's capital gain/loss** (hence the /2).

5.3. Insufficient budget after execution

If, **with the updated values** (based on the number of purchases and sales), the budget is insufficient: **the transfer still goes through** and the budget becomes negative. The next transfer (outside the mercato) will then only be possible if it makes the budget **less negative**.

5.4. Worked examples (implementation validation)

Placing orders. Players: P1 = 3,000,000, P2 = 1,000,000, P3 = 4,000,000, P4 = 1,000,000. User G1, budget 3,300,000, tax = 8%

- 1st order (sell P2, buy P1): 3,300,000 + 1,000,000 ≥ 3,000,000 + (0.08 × 3,000,000) → remaining mercato budget = 1,060,000 → **accepted**.
- 2nd order (sell P4, buy P3): 1,060,000 + 1,000,000 ≥ 4,000,000 + (0.08 × 4,000,000) → mercato budget = −2,260,000 → **rejected**.

Execution — Scenario 1.

- P1: 5 purchases, 22 sales (of which 2 from initial squads) → 3,000,000 + (5 − (22−2)) × (20000/2) = 2,850,000.
- P2: 5 purchases, 20 sales → 1,000,000 + (5 − 20) × (20000/2) = 850,000.
- G1 budget after mercato: 3,300,000 + 850,000 − (2,850,000 + 0.08 × 2,850,000) = 1,072,000.

Execution — Scenario 2 (negative budget).

- P1: 200 purchases, 5 sales → 3,000,000 + (200 − 5) × (20000/2) = 4,950,000.
- P2: 5 purchases, 5 sales → 1,000,000 + (5 − 5) × (20000/2) = 1,000,000.
- G1 budget: 3,300,000 + 1,000,000 − (4,950,000 + 0.08 × 4,950,000) = −1,046,000.

12 Speculation

Speculation means making money from changes in players' values: buying a player before their price rises and selling them at the right time.

- The **Speculation** tab in My Team shows, for each player in your squad, their change in value **since the last mercato** or **since a chosen date**, as an amount. The Value tab shows a percentage under the value representing the change since the manager bought the player.
- The Players > Speculation list ranks all players by purchases, sales, holders and change (since the start, since the last mercato, today).
- The **buy / sell capital gain** made by the manager increases the value of their squad and feeds the **Speculation** ranking.
- Player **sold** → value = **– €20,000** (except when the selling manager acquired them in their initial squad, in which case value= 0).
- Player **bought** → value = **+ €20,000**.

> **To be decided:** the exact scale for the value of a purchase/sale

- **Initial line-ups do not generate any capital gain**; selling a player acquired in the initial line-up **does not generate a capital loss**.

13 Manager earnings

A matchday's result

Matchday earnings = Starters' primes (captain ×2 included) + Bonus (+10% of the starters' primes if successful) + Predictions

Substitutes' earnings (“Bench primes”) count towards the squad value but do not add any money to the transfer budget.

> **To be decided:** the exact scale for each prime-related event

Data source: Flashscore for manual entry.

The Gamer Profile – Performance page breaks the squad value down into:

- **Performance earnings**: total of starters' primes, captain, bonus and predictions;
- **Mercato earnings**: capital gains and losses made on transfers;
- **Locked account**: reserved amount, not available for now.

> **To be decided:** the exact scale of the amount reserved for the locked account

It also shows the rank in each ranking, the matchday-by-matchday rank evolution, the details of the last matchday (each starter's prime, bench, bonus, predictions) and the matchday history (matchday ranking, performance, total earnings, trophies won).

14 Rankings

Ranking	What it primes
Overall	The total value of the squad (the main ranking)
Primes	The earnings generated by the starters
Predictions	Prediction earnings
Speculation	The capital gain made on purchases and sales
Bench	The substitutes' earnings
Honours	Honours points accumulated over all seasons

- Each ranking can be viewed for the whole season, the **first half**, the **second half** or a specific **matchday**.
- You can search for a username and filter to **show only your friends**
- Each table can be sorted by any column using the blue arrow

Values that must appear in the ranking tables:

Overall: Rank, name, favourite club, squad value, budget, honours

Primes: Rank, name, favourite club, squad value, total primes, latest primes

Predictions: rank, name, favourite club, squad value, total predictions, latest predictions

Speculation: Rank, name, favourite club, squad value, speculation (total sales – total purchases), number of transfers made

Bench: rank, name, favourite club, squad value, bench primes, latest bench primes

Honours: Rank, name, favourite club, best ranking, TOP10 (number of times), Top20 (number of times), TOP30 (number of times)

PLAYERS PAGE

Can be sorted by position, by club, by price

Overall: Rank, club+name, value (current), initial value, primes (total), holders (presence in gamers' squads), last mercato (number of purchases – number of sales)

Performance: Rank, club+name, value (current), goals, assists, penalties, yellow cards, red cards, matches (matches played), starts,

If sorted by goalkeeper, the ranking becomes:

Goalkeeper: Rank, club+name, value (current), number of saves, number of clean sheets; yellow cards, red cards, matches (matches played), starts,

15 Honours and trophies

Honours points

At the end of a period, the final ranking awards decreasing **honours points** according to the position achieved (1st, 2nd, 3rd, then in brackets: 4th–10th, 11th–20th, 21st–30th, 31st–50th, 51st–100th). These points are awarded for:

- the overall season ranking;
- the first-half ranking;
- the primes ranking;
- the predictions ranking;
- the**matchday badges** (best managers of a matchday).

Honours points accumulate season after season and make up the **Honours ranking**.

Rank	Overall	First half	Primes	Predictions	Matchday primes	Matchday predictions
1st	300	15	70	35	15	5
2nd	250	10	60	30	12	–
3rd	200	5	50	25	10	–
4th–10th	150	–	30	15	5	–
11th–20th	100	–	25	10	4	–
21st–30th	75	–	20	8	3	–
31st–50th	50	–	10	6	2	–
51st–100th	25	–	6	4	1	–

Trophies

- Each notable performance unlocks a **trophy** (“won / total” counter).
- The manager **ticks the trophy of their choice**: it appears on their player card and in all MarketFoot rankings.
- The history summarises each season: points, best rank, positions in each ranking.

16 Hall of Fame

The Hall of Fame keeps all-time records, **per matchday** or **per season**, with a podium and the top 10 (your own position is also shown).

Category	Record	Definition
Managers	Primes	Biggest earnings from starters
	Bench	Biggest earnings from substitutes
	Mercato	Biggest buy / sell capital gain
Players	Primes	L1 players who generated the most primes
	Purchases	Most bought in the mercato
	Sales	Most sold in the mercato

Postponed matches

- A player taking part in a postponed match sees their value **increase by the amount of their primes**, just like in a regular match.
- Players **started** on a matchday containing a postponed match are **recorded**; their primes are **paid when the match takes place**, **even if the gamer has sold them in the meantime**.
- At the time of the freeze, the players concerned **do not earn** any primes in the "matchday primes" ranking.

- These deferred primes follow the standard split: **70% budget, 30% locked account**.
  To be decided: the exact scale of the amount reserved for the locked account

Example: Marseille–Nice (MD12) postponed. A Marseille forward + a Nice defender who were started are recorded at the freeze of the last team playing MD12. Even if they are sold before MD14, if the match is played after MD15, the gamer receives their primes.

17 Staying informed in the game

- **Sidebar** (on every screen): your username, your squad value, your budget, your position in the overall ranking (always centred) and the current Top Buys / Top Sells.
- **Ligue 1**: matchday results and kick-off times, match sheets with MarketFoot primes, official league table (overall, home, away, form).
- **Club profile**: the club's squad (position, matches, starts, value) and fixtures.
- **Players**: table filterable by club, position and price, with three views — Overall (value, initial value, primes, last prime, holders, last mercato), Performance (matches, starts, goals, assists, cards) and Speculation (purchases, sales, holders).

- **My Space**: profile (avatar, username, favourite club, region), login and security, light / dark / automatic theme, consents and account deletion.

> - **To be decided:** dark theme

18 Points to be clarified

These mechanics appear in the screens without being fully explained there. They must be settled before writing the official rules:

- **Starting budget**
- **Primes scale** per event, and possible variation depending on position or playing time.
- **Impact of a purchase / sale** on a player's value (fixed or proportional amount), and when it is applied (real time or deferred).
- **Transfer taxes**: rate of the free-transfer tax and of the mercato tax
- **Locked account** : the share allocated to the locked account is still to be defined.

19 For developers

Give the admin the ability to delete an account

20. Inventory of Figma screens

Screens

1. Select your player

First line-up screen, before any recruitment. The pitch and the bench are empty: each slot is waiting for a player, organised by position (GK, DEF, MID, FWD). On the right, the selection panel lists the available players. The help message reminds you to choose according to your budget, with a maximum of 4 players from the same club. The left column shows the username, squad value, budget, the top of the overall ranking and the Top Buys / Top Sells.

2. Select your player - Detailplayer

Same first line-up screen, with a player's quick profile open next to the selection panel (here a forward). The profile shows their club, position, value, form over the last 4 matches with the prime for each, initial value, total earnings, number of holders, mercato impact and statistics (matches played and starts, not played, goals, assists, cards). A “see full profile” link leads to the complete profile.

Hover rules:
player panel, (sb29) under the shirt -> see the team profile

3. Select your player – One selection

First line-up after a first signing: one player (a forward) is placed on the pitch with their value. The other slots remain empty. This screen shows the “one selection” state of the recruitment flow.

4. Team Page - Composition

My Team page, Line-up tab, full squad: 11 starters on the pitch in a 4-3-3 and 8 substitutes on the bench. Each player shows their shirt, name and value. The help message explains how to change the line-up. The Bonus panel is open by default. The selector above the pitch (Value / Speculation / Owners) is set to Value by default (no percentage under the players since this is the 1st line-up).

5. Team Page – Composition (speculation)

Same screen with the Speculation filter: each player shows the amount gained or lost (positive or negative) since the last mercato. A selector lets you choose “Since the last mercato” or “Since” a date from the calendar.

6. Team Page – Composition (possession)

Same screen with the Owners filter: each player shows the number of managers who have them in their team.

7. Team Page - Composition

Line-up with, under each player, their value and a percentage change. This is the default view, also found on the Captain, Transfer and Predictions screens. Bonus panel on the right.

8. Team Page – Composition (switch players)

Variant of the line-up in which two attacking starters have swapped places on the pitch. It illustrates a formation change in progress. The bench is unchanged.

9. Team Page – Composition done

Variant of the line-up after a substitution: a starter has moved to the bench and a substitute has taken their place on the pitch. It illustrates the result of a starter / substitute change.

10. Team Page - Captain choice 1

My Team page, Captain tab. The pitch and the bench remain visible. The help message explains that the captain's earnings are doubled for the next matchday. On the right, the Captain panel lists the 11 starters with a checkbox, a usage counter (x/6) and a link to the profile. The Confirm button becomes active once a player is chosen.

11. Team Page - Captain choice 2

Same Captain screen, with the player selected and the option to confirm.

12. Team Page – Transfer 1

My Team page, Transfer tab, outside the mercato. The help message explains to choose the player to replace, then their replacement from the list. The Transfers panel is on the right, with nothing selected.

13. Team Page – Transfer 2

Same Transfer screen with the standard menu bar. Transfer panel confirmed

14. Team Page – Transfer 3

Transfer screen after a completed transfer: the original forward has left the team and a new forward appears on the pitch with their value. The bench is unchanged.

15. Team Page - Transfer MERCATO

Transfer screen during a mercato period. The help message gives the date and time the mercato closes and invites the manager to add their transfer orders before that deadline. The Transfers panel is in its “Mercato” state. The header layout differs slightly from the other Transfer screens.

16. Team Page – Predictions 1

My Team page, Predictions tab. The pitch and the bench remain visible. On the right, the Predictions panel lists the matchday's 9 matches with, for each one, the date, the time and the 1 / N / 2 choices. A selector lets you switch matchday.

17. Team Page – Predictions 2

Same Predictions screen. The central content is identical: the screen shows another state of the panel, with predictions being entered.

18. Team Page – Predictions 3

Same Predictions screen, third state of the panel, the results: correct predictions in green, wrong ones in red, the correct result in black, with the score, the managers' average and the matchday earnings.

19. Hall Of Fame

Records page. At the top, two blocks of categories: Managers (Perfs: starters' primes; Bench: substitutes' primes; Mercato: buy / sell capital gain) and Players (Primes of L1 players; Purchases: most bought in the mercato; Sales: most sold). Here, the “Earnings record” category (the manager who earned the most thanks to their starters) is displayed with a podium (1st, 2nd, 3rd), the ranking from 4th to 10th with the matchday and season of the record, and the logged-in manager's position. A selector lets you choose Per matchday or Per season.

20. Ranking Page - 1

Rankings page. The tabs offer Overall, Earnings, Predictions, Speculation, Honours and Bench, with a period filter (First half, Second half, Matchday), a username search and a “Show only my friends” option. The table shows the rank with its evolution, the username, favourite club, squad value, budget and a points column. Pagination is at the bottom, with a championship selector (2026/2027).

21. Ranking Page - 2

Same Rankings page with the Matchday filter active: a matchday selector (e.g. MD32) appears and the ranking covers that matchday.

22. Ligue 1 - Ranking

Ligue 1 page, Table tab. A banner at the top shows the matchday's matches (day, time, scores). The league table gives the position, team, points, matches played, won, drawn and lost, goals for and against, goal difference and form over the last matches (V / N / D). Filters let you choose Overall, Home or Away.

23. Ligue 1 - Results page

Ligue 1 page, Results tab. The same banner with the matchday's matches stays at the top. The details of a match are displayed: date, score, then the MarketFoot match sheet for both teams. For each player, you see the position, minutes played and the prime earned or lost (the prime value is circled if the player is in our squad, as a starter or substitute). Players are split into Starters, Substitutes (including DNP = did not play, with a malus) and Not in squad.

24. Player Table - 1

Players page, Overall tab. You can search for a player and filter by price (slider between a minimum and a maximum), by club and by position (All, Goalkeepers, Defenders, Midfielders, Forwards). The table shows the rank, club, name, value, initial value, primes, last prime, number of holders and the impact of the last mercato. Pagination is at the bottom.

25. Player Table - 2

Players page, Performance tab. The filters are the same, with the “by club” filter selected, which is a cloud of the 18 clubs where several can be selected. The columns are statistics: value, matches played, starts, goals, assists, cards, etc.

26. Player Table - 3

Players page, Speculation tab. A period filter offers Since the start, Since the last mercato or Today. The columns give the value, initial value, primes, purchases, sales, holders and the impact of the last mercato.

27. Player Table - 4

Same Speculation tab, in a variant where the table is shorter (fewer rows displayed). This is, for example, the result of a filter or a search.

28. Player Form (in my team)

Full profile of a player who is in the manager's team. Header: name, club, position, form (V / N / D), current value and % change. The “Value in my squad” block gives the purchase date and price, their primes, their total mercato gain since joining the manager's team and the number of holders. Then come the season's performances, market activity (purchases, sales, in total, and below that, today) with a link to the details, then the primes history: chart of primes from MD1 to MD34, total earnings and a match-by-match table (date, match, minutes, detailed bonus and malus).

29. Team Form

Profile of a Ligue 1 club. The squad table lists each player with their position (G, D, M, F), matches, starts and value, with a “See full squad” link that also shows players who have not played any matches yet. The club's fixtures follow, matchday by matchday (date, time, opponent, score), with past and upcoming matches.

30. Player Form (not in my team)

Full profile of a player who is not in the manager's team. It has the same structure as the “in my team” profile, but the top block shows the MarketFoot value (initial value, primes, total mercato, holders) instead of the purchase information.

31. Player Form (activitydetails)

Details of a player's market activity, accessible from their profile (breadcrumb at the top). Filters offer All, Purchases, Sales, Primes or Mercato. The chronological table gives, for each movement, the date, time, type (purchase, sale, matchday primes, mercato), the positive or negative impact and the player's new value.

32. Gamer Form - Performance

Manager area, Performance tab, with a season selector. It shows the rank in each ranking (Overall, Primes, Predictions, Bench, Speculation, Honours) and a chart of ranking evolution. The squad value is broken down into total primes, total mercato and locked account. The result details the starters' earnings, predictions and the total, with the option to change matchday (set to the latest by default). The matchday history follows (ranking, performance, primes, trophies), then the list of transfers (date, Mercato or Free type, outgoing player, incoming player, balance). The page ends with the primes of each starter, the bench and the bonus for the last matchday.

33. Gamer Form - Honours

Manager area, Honours tab. It shows the honours points and the rank in the honours ranking, the number of trophies won out of the total and the best ranking. A trophy grid details the points earned according to the final position in each ranking (overall, first / second half, primes, predictions) and the matchday badges. The manager ticks the trophy to display on their player card and in the rankings. A season-by-season history gives the points and positions achieved.

34. Gamer Form - Friends

Manager area, Friends tab. A username search and filters (Overall, First half, Second half, Matchday) come with a friends table: rank, username, favourite club, squad value, budget, primes, latest primes and honours points. The logged-in manager's row appears among their friends.

35. Gamer Form - My Space

Manager area, My Space section (settings). The profile includes the avatar (file upload), username, status, favourite club, title and region. Then come login and security (email address, password), theme (light, dark, automatic), personal data (consents, terms of use, privacy policy, legal notice), then logout and account deletion.

21. “Hover / Click” rules

TOOLTIPS (bubble)

- each shirt: shows “see the [Club] profile”
- each name: shows “see [player name]'s profile”
- eye: shows “see quick profile”
- (+) in panel: shows “add to my team”
- (-) in panel: shows “remove from my team”
- © captain: shows the number of times they have been captain = “captain 4 times”
- [©] captain: shows “this player has already been captain 6 times, their primes will no longer be doubled”
- each icon: meaning. E.g.: ball = “goal”, etc
- every time there is a [Club name] on a profile. E.g. (PSG), (SB29) = shows “see the [Club] profile”
- each bin icon: show “delete”
- logout icon: show “log me out”
- player who cannot be replaced/transferred: shows “team frozen”
- prediction in progress: shows “your prediction can no longer be changed”
- prediction: green = shows “correct prediction”, black = shows “result”, red = shows “wrong prediction”

CLICKABLE POINTER

- each manager name -> link to their profile
- each player name -> link to the player's profile
- each match score box -> link to the match profile

CLICKABLE SELECTION GRADIENT

- primes history, on each box: clickable selection gradient
- match sheet, on each box: clickable selection gradient
- ranking box on Gamer Profile: clickable selection gradient

22. General rules

- Whichever panel is open (predictions, transfer, bonus…), substitutions with the starters can always be made.
- Clicking a player opens their profile (“player panel”) to the left of the open panel.
- Clicking a shirt opens the page of the team in question directly.
- Frozen team -> players from that team cannot be modified.
Players from that team cannot be recruited.
- Captain choice is possible up to 2h before the match, as long as their team is not frozen. If the captain has been chosen and their team is frozen, they can no longer be changed.
- A free transfer is possible as long as the player's team is not frozen.
- Bonus choice up to 2h before the first match of the matchday.
- The result of each matchday is the starters' primes; only the starters' primes feed the budget.
- The Ligue 1 page opens directly on the league table, with the matches of the last matchday in the results banner.
- Each table must be sortable by each of its columns (blue arrow).

23. Error messages

- If the captain has been used 6 times, a red captain icon is shown, with this information on hover: show “your captain has already been used 6 times, their primes can no longer be doubled”.
- If, in real life, a player is transferred to another club outside Ligue 1, they may still be in a manager's squad. In that case, indicate that the player can no longer earn anything; they count as 0 (their primes too). Show “This player is no longer in Ligue 1, so their value can no longer change”.
